

## The NATF Invites you...

*To learn more about TETRA*

TETRA is the leading digital land mobile radio standard in use around the world and continues to grow, supporting the day-to-day operations and mission-critical activities for a variety of major customers in the public safety, utilities, transportation, oil & gas, and other industrial and commercial sectors.

This free, day-long TETRA seminar and training workshop will give attendees the opportunity to broaden their knowledge and insight about the benefits of using TETRA for critical voice and data communications applications, to hear from industry experts regarding experiences in actual case studies, and to participate in tutorial sessions on some of the deeper technical aspects of TETRA technology.

### OVERVIEW

- Overview of Key TETRA Features and Voice & Data Services
- Case Study: Pine Bend Refinery (Flint Hills Resources)
- TETRA for Utilities, Public Transit, and Airports
- TETRA Training Management
- Training Session on TETRA Coverage Analysis & Simulation
- Discussion of TETRA Frequency Spectrum and Licensing Issues
